

LAWN CARE TIPS

Your outdoor space is an extension of your home. Mowing, trimming, fertilizing and weed control increase the curb appeal. Keeping grass mowed weekly will keep weeds at bay and protect from lawn disease and weeds.

Pre-emergent application, keeps the seeds from spreading weeds.

Post-emergent application slows down the growth of weeds and prevents future weeds.

Fertilizer application promotes green growth, adds nitrogen the grass needs to withstand extreme heat, cold and pest.
